

Quality Management Suite Quality and Compliance

Solutions Paper

Optimise contact centre quality and compliance to create outstanding customer experiences across your business.

Create a positive impact on your customer interactions using Enghouse Interactive's comprehensive software solution Quality Management Suite (QMS). Get the tools you need to develop and measure contact centre performance while ensuring, in real-time, that best practices and compliance requirements are met.

THE CHALLENGE

Balancing the goals of the business and customer needs is difficult. In a dynamic environment, organisations need to provide a consistent, accurate and high standard of customer service, while remaining profitable and compliant with industry regulations.

With more information flowing through a contact centre in a single day than any other part of the business, this has become a very complex and delicate management task.

Developing a great customer service gives your business a competitive advantage over the opposition. To achieve a great reputation for customer service you need real-time, enterprise level technology and compliance tools that will scale to your business needs with a low total cost of ownership.

We chose QMS from Enghouse because it is flexible, scalable and provides a complete solution for protection, compliance and quality, to ensure we deliver exceptional service to our customers

FIFE COUNTY COUNCIL

THE SOLUTION

Quality Management Suite (QMS) is part of Enghouse Interactive's comprehensive Communications Center solution for contact centres. With its light touch and easy to use interface, QMS expands the capabilities and accuracy of agents, empowers managers and provides peace-of-mind for customer voice interactions.

Core QMS web client functions are:

- Call Recording
- Text Recording
- Screen Recording
- Agent Evaluation

Call, text and screen recording documents customer interactions for improved dispute resolution giving your business evidence for liability protection and audit trails.

Recordings are an invaluable training aid to develop agent skills through highlighting best practices and identifying individual areas for attention. Tight integration with Communications Center allows recordings to be accessed within the common agent or supervisor TouchPoint interface.

Scheduled reporting on quality metrics gives managers the tools to assess areas of service that need to be improved. The Dashboard tab displays up to four key metric charts for a quick overview making QMS a powerful yet simple and intuitive contact centre management tool.

FIVE THINGS YOU NEED TO KNOW

- Achieve regulatory compliance: Meet compliance and PCI DSS requirements, and improve dispute resolution with full-time or on-demand call, text and screen recording.
- 2. Ensure exceptional service: Maintain quality customer interactions via unobtrusive live monitoring and measurable performance indicators for superior agent capability.

3. Know your customer:

Recordings and real-time speech analysis provide valuable insight into customer sentiment that can be used to identify trends, such as churn, competitive analysis, or business opportunities.

- 4. Provide real-time feedback: Speech Analytics gives agents scores, checklists and hints during a call to maintain optimum customer service.
- 5. Simplify usability:

Tight integration with Enghouse Interactive Communications Center (CC) enables unified user admin whilst the alignment of the GUI to the CC TouchPoint client creates a seamless end user experience.

MAXIMIZE CUSTOMER SERVICE AND QUALITY

Real-time Speech Analytics (RTSA) is an invaluable tool for quality assurance, campaign optimisation, and agent development. This powerful QMS add-on module functions as a virtual coach to ensure every customer call is handled with the same high quality and compliance standards using speech analytics in real-time or on batch processing from the recording database.

RTSA analyses agent and customer speech to provide live feedback to agents, ensuring quality and compliance through script adherence ('hard speech evaluators') and alerts for cross talk, poor sound, stress levels etc. ('soft speech evaluators').

RTSA can auto-analyse historical recordings to identify trends, issues or opportunities and to help identify individual agent training needs. Up to 70 hours of recordings can be analysed in less than an hour.

Supervisors and managers can address quality issues in real-time or review flagged or bookmarked recordings to assess individual agent training needs to fine-tune the quality of your customer service.

ABOUT ENGHOUSE INTERACTIVE

Enghouse Interactive's integrated suite of solutions includes multi-channel contact centre, self-service, attendant operator consoles and workforce optimisation. This wide portfolio places us in the unique position to offer customers and partners a complete, fully featured solution from a single vendor. These solutions support the full range of deployment methods from premise-based to private, public or community cloud and hybrid requirements.
